

Patient: Jane Doe

DOB: 06/21/1960

Report Date: 01/10/2024

Clinical History:

Patient reports persistent cough for 3 weeks, mild shortness of breath, and chest discomfort. Smoker for 15 years, quit 2 years ago. No fever, chills, or night sweats.

Chest X-Ray (PA View) Report:

- Lungs: Mild hyperinflation seen bilaterally. No focal consolidation or mass lesion.
- Cardiac Shadow: Enlarged cardiothoracic ratio, suggestive of mild cardiomegaly.
- Diaphragm: Normal
- Pleura: No evidence of pleural effusion
- Bony Thorax: Normal

Impression:

Mild hyperinflation consistent with chronic obstructive pulmonary disease (COPD). Mild cardiomegaly, likely related to long-standing hypertension. Recommend pulmonary function tests and follow-up with cardiology.
